SUMMARY

Backend software engineer specialized in Java and Spring Boot, focused on distributed server-side systems, software architecture, and scalable, reliable services. Works across the full backend stack: microservices and event-driven architecture, relational and geospatial data, messaging and streaming, and the infrastructure that runs them. Prioritizes stability, maintainability, and design precision — building systems that don't just work, but can be trusted.

PROFESSIONAL EXPERIENCE

Backend Developer, *Navashgaran-e Asr-e Parseh*

02/2024 – Present | Tehran

- Developed, maintained, and optimized enterprise-scale backend services using Java and Spring Boot
- Designed and implemented RESTful APIs for high-traffic production systems
- Contributed to layered, service-oriented architecture design
- Led data migration from legacy systems to modern data structures
- Collaborated closely with backend, database, and infrastructure teams
- Contributed to technical leadership through code review, technical decision-making, and mentoring junior and mid-level developers; served as Tech Lead on select parts of the project
- Prioritized scalability, stability, and maintainability across production systems

Technologies: Java, Spring Boot, Backend Architecture, Data Migration, Docker, Docker swarm, Nfc, LLM

Freelance Backend Developer (Concurrent), *Remote*

04/2024 – Present | Remote

Independent backend engineering work carried out alongside full-time employment, delivering production-grade systems for private clients under NDA (no employer or product names disclosed).

- Enterprise Backend Framework & Code Generation Platform — modular Spring Boot framework with a CLI code generator producing production-ready services with built-in security, data persistence, caching, messaging, workflow, and observability; shared foundation for accelerating team development Java 21, Spring Boot, Spring Cloud, Multi-module Maven (BOM + 20+ modules), OAuth2/OIDC, Redis, RabbitMQ, Resilience4j, Camunda
- Real-Time GPS Fleet Tracking & Navigation Platform — real-time vehicle telemetry ingestion over UDP/TCP, live position broadcasting on an interactive map, geofencing, rule-based alerting, and trip analytics for large fleet management Java 21, Spring Boot, Spring Cloud Gateway, Netty, PostgreSQL/PostGIS, RabbitMQ, Redis, WebSocket, MinIO, React/Next.js, MapLibre

- Visual Content Design Studio (Canvas Editor) — web-based design studio (Figma/Canva-style) for building posts, stories, and menus from reusable widgets, with a server-side render/export pipeline and multi-channel publishing on a contract-first microservices platform Java 21, Spring Boot, OpenAPI/gRPC (contract-first), Apache Kafka (Outbox/Saga), PostgreSQL (database-per-service), ClickHouse, Elasticsearch, Kubernetes/Helm, Next.js
- Multi-Channel Social Media Management & Analytics Platform — multi-tenant platform unifying inbound conversations across channels, with scheduled publishing, rule-based automation, and engagement/sentiment analysis on high-volume message data Java 21, Spring Boot, Spring Cloud Gateway, PostgreSQL/PostGIS, ScyllaDB, Redis, RabbitMQ, Camunda BPM, Python/FastAPI, React
- Online Learning Platform (Academy) — event-driven online education platform with course catalog, enrollment, payments, verifiable certificate issuance, and content management across separate domain services Java 21, Spring Boot, Spring Cloud (Eureka, Config, Gateway), PostgreSQL, RabbitMQ, MinIO, JWT/RBAC, Docker
- E-Commerce Platform (Specialty Retail) — production-scale retail backend as Spring Boot microservices behind an API Gateway — storefront, customer self-service panel, and admin management Java 21, Spring Boot, Spring Cloud (Eureka, Config, Gateway), PostgreSQL, RabbitMQ, Redis, MinIO
- Zero-Trust Internal Network Access Gateway — least-privilege access gateway exposing only explicitly authorized internal services on stable virtual addresses, with a reconcile loop building WireGuard peers, NAT/firewall rules, and DNS from database state Python, FastAPI, PostgreSQL, WireGuard, nftables, CoreDNS, JWT, Docker, React, Electron
- Hands-Free Assistive Interaction System (IoT + Computer Vision) — privacy-first assistive system converting head movement (IMU) and webcam eye/gaze tracking into calibrated input events, enabling hands-free control of computers and smart homes for people with limited mobility Python, MQTT, OpenCV, MediaPipe, NumPy, PySerial, Arduino/C++ (IMU BNO085), event-driven architecture

Backend Developer Intern, Neshan Maps

07/2023 – 09/2023 | Mashhad

- Worked on the backend team as a formal intern, contributing to backend services for real product features
- Gained hands-on experience with microservices architecture
- Implemented caching and data management with Redis
- Completed Neshan's specialized backend bootcamp, applying professional development processes and production practices

Skills: Backend Development, Git, Java 17, Spring Boot, PostgreSQL, Microservices, RabbitMQ, Redis, Docker, PostGIS

Software Developer — Frontend Focus, Launching Max

02/2023 – 07/2023 | Mashhad

- Developed user interfaces for enterprise web applications using React.js and HTML5
- Implemented web pages and integrated them with backend APIs
- Worked closely with the backend team in a team-based environment
- Improved UI/UX and contributed to the product development process within a company structure

Skills: Teamwork, React.js, HTML5, JavaScript, Frontend Development

EDUCATION

Islamic Azad University, B.Sc. Computer Engineering

03/2025 | Tehran

Khayyam University

03/2022 – 03/2025 | Mashhad

Transferred to Tehran due to relocation

SKILLS

- **Languages:** Java, Python, TypeScript/JavaScript, SQL, PHP
- **Backend & Frameworks:** Spring Boot, Spring Cloud, Hibernate/JPA, Laravel, Netty, REST, gRPC, WebSocket
- **Concurrency & Performance:** Multithreading, JVM Optimization, Garbage Collection Tuning, Caching (Redis/Redisson), Resilience4j, Connection Pooling, Thread-Safe High-Throughput Services, Production Profiling
- **Architecture & Design:** Microservices, API Gateway, Event-Driven Architecture (Outbox/Saga), Domain-Driven Design, Database-per-Service, System Design, Design Patterns, Data Migration Patterns
- **Databases & Geospatial:** PostgreSQL, PostGIS, Oracle DB, PL/SQL, ScyllaDB/Cassandra, Redis, MySQL, ClickHouse, Elasticsearch
- **Messaging & Streaming:** Apache Kafka, RabbitMQ, MQTT, WebSocket/STOMP
- **DevOps & Infrastructure:** Docker, Kubernetes (Helm/ArgoCD), Linux, CI/CD (Jenkins), Git, MikroTik networking, MinIO/Object Storage, Proxmox/ESXi, Observability (Prometheus/Zipkin)
- **Practices & Tools:** Unit & Integration Testing (JUnit, Testcontainers), Code Review, Prompt Engineering, LLM-Assisted Development
- **Soft Skills:** Problem-solving, Analytical Thinking, Accountability, Effective Teamwork, Composure Under Pressure, Focus in Difficult Conditions

LANGUAGES

Persian (Native) | **English**
